

VICTORIA HIGH SCHOOL Newsletter

November, 2026

Dear Parents! We are excited to share with you the latest updates from our school community. The past weeks have been filled with inspiring activities, cultural experiences, and hands-on learning opportunities for our students. In this newsletter, you will find a brief overview of what our classes have been working on: from an exceptional Hermitage exposition in Obecní dům and a film screening about Franz Kafka, to our Thematic Days focused on Spanish and German language and culture.

You can also look forward to the first monthly update from the Science 360 program, information about our students' first visits to laboratories, an introduction to our peer-support meetings in the project against addiction to social media, and a summary of the EduFest university fair for our second graders. Thank you for your ongoing support. Together we create a meaningful learning environment for our students.

Hermitage Exposition in Obecní dům

Our students had the wonderful opportunity to visit the Hermitage exposition in Obecní dům, where they explored world-renowned artworks and deepened their understanding of art.

Kafka Movie

As part of our literature and cultural studies curriculum, students attended a screening of a film about Franz Kafka. This experience helped them connect Kafka's themes with historical context and modern interpretations. After the screening, classes engaged in discussions about symbolism, identity, and storytelling in Kafka's work.

Peer Meeting: Project Against Addiction to Social Media

As part of our prevention and wellbeing program, students participated in a peer-to-peer meeting focused on healthy digital habits and preventing social media addiction. The meetings encourage honest conversation, self-reflection, and mutual support. Students learned strategies for balanced technology use and how to recognize early signs of unhealthy online behavior.

Science 360: First Monthly Outcome

The first month of our Science 360 program has been full of curiosity and interdisciplinary learning. Students worked on integrating biology, chemistry, physics, math, and social sciences through real-life examples and collaborative projects. We are excited to share that the first monthly outcomes show strong engagement and growing confidence in scientific thinking.

First Visits in Laboratories

Our students began their practical scientific journey with their first laboratory visits. Under the guidance of our teachers, they explored modern equipment, observed experiments, and gained insight into laboratory safety and scientific procedures. These experiences support their long-term interest in science and help them connect theory with practice.

Thematic Days: Spanish and German Language

Thematic Days brought vibrant language and cultural learning to our school. Students explored traditions, music, everyday communication, and the cultural diversity of Spanish- and German-speaking countries. Interactive workshops and activities helped students practice the language in an enjoyable and authentic way.

EduFest – Universities Fair for Second Graders

Our second graders attended EduFest, a large fair presenting universities and study opportunities from across the country. They had the chance to speak directly with representatives from various fields, ask questions, and explore different career pathways. EduFest provided valuable inspiration as students begin thinking about their future studies.
